

Logical architecture

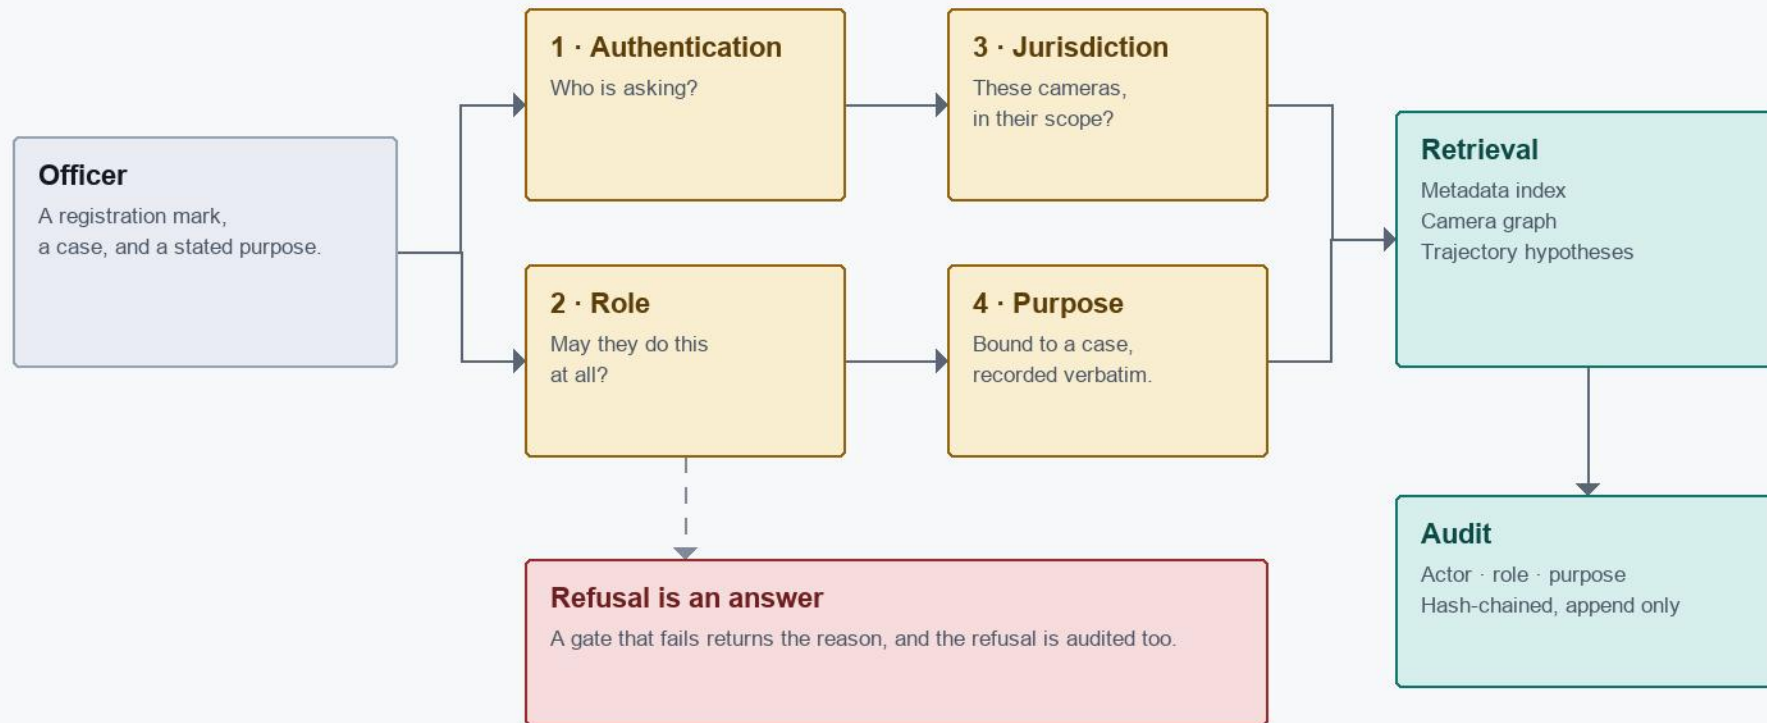

Model 1 registry as the spine · Model 3 federated intelligence · Model 2 as fallback

Video does not move. 80,000 cameras at 2 Mbps is 160 Gbps sustained (MODELLED), which is why the centre receives metadata and the decode stays in the district that owns the camera.

A search, end to end

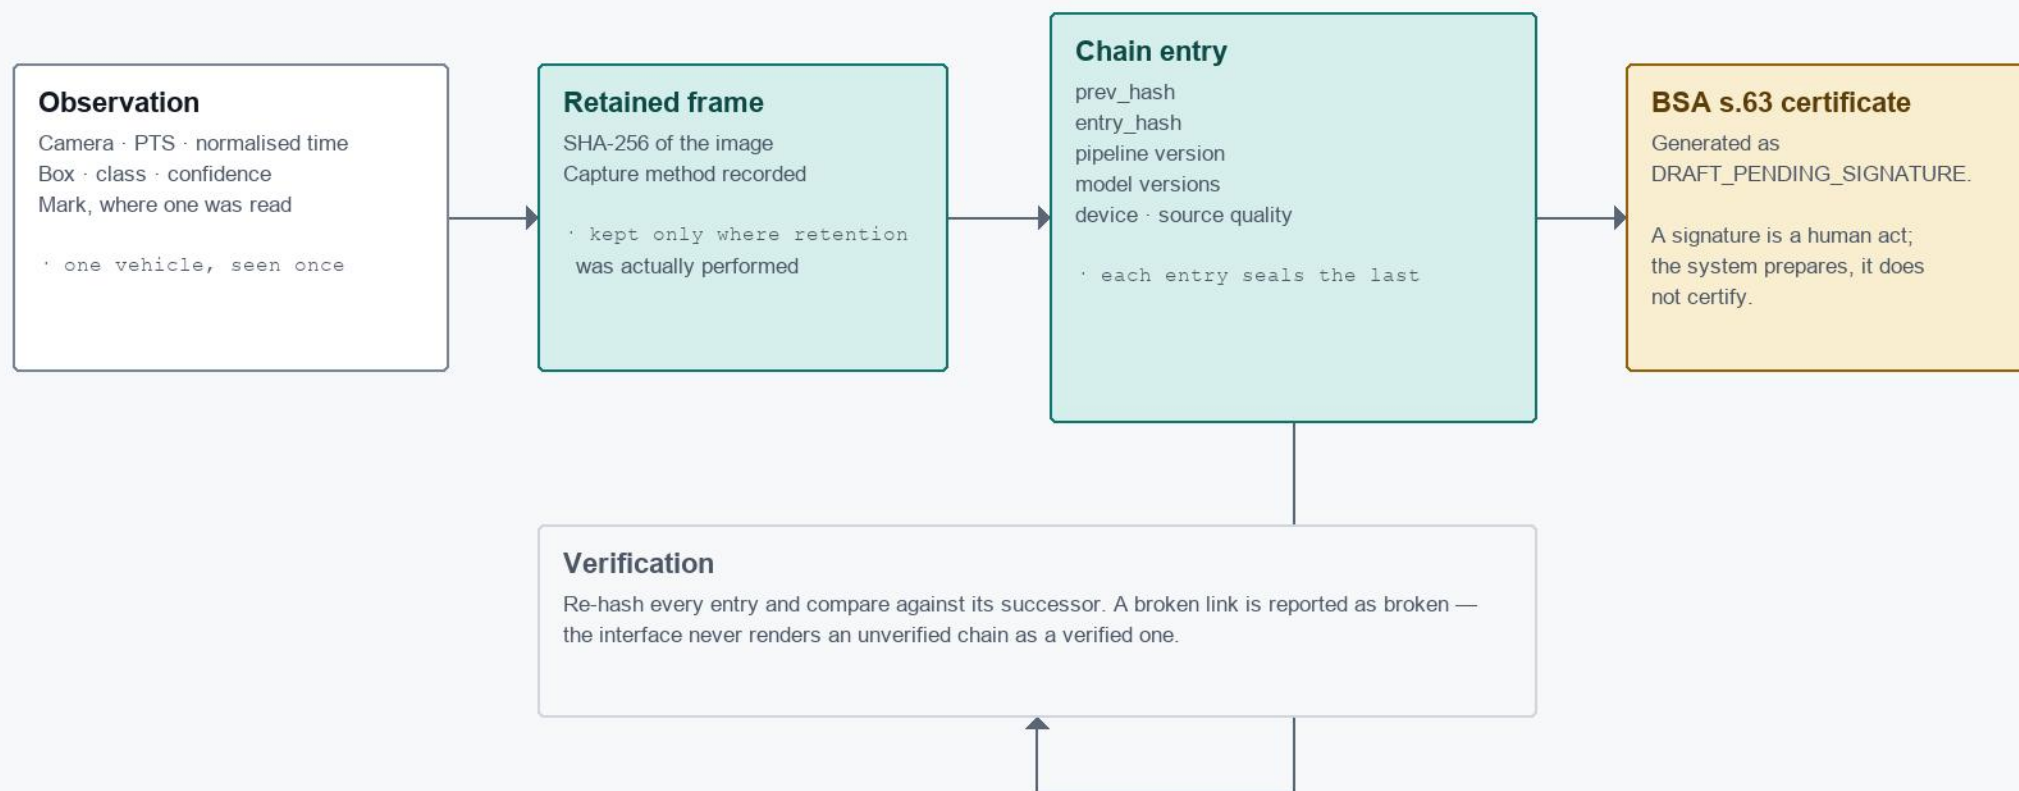

Four gates. Authentication, role, jurisdiction, and the purpose the search is bound to.

Purpose binding is not a dialog dismissed once — it is standing furniture in the interface, and it is written into every audit record the search produces. 10 of 10 refusals verified (MEASURED).

Evidence chain

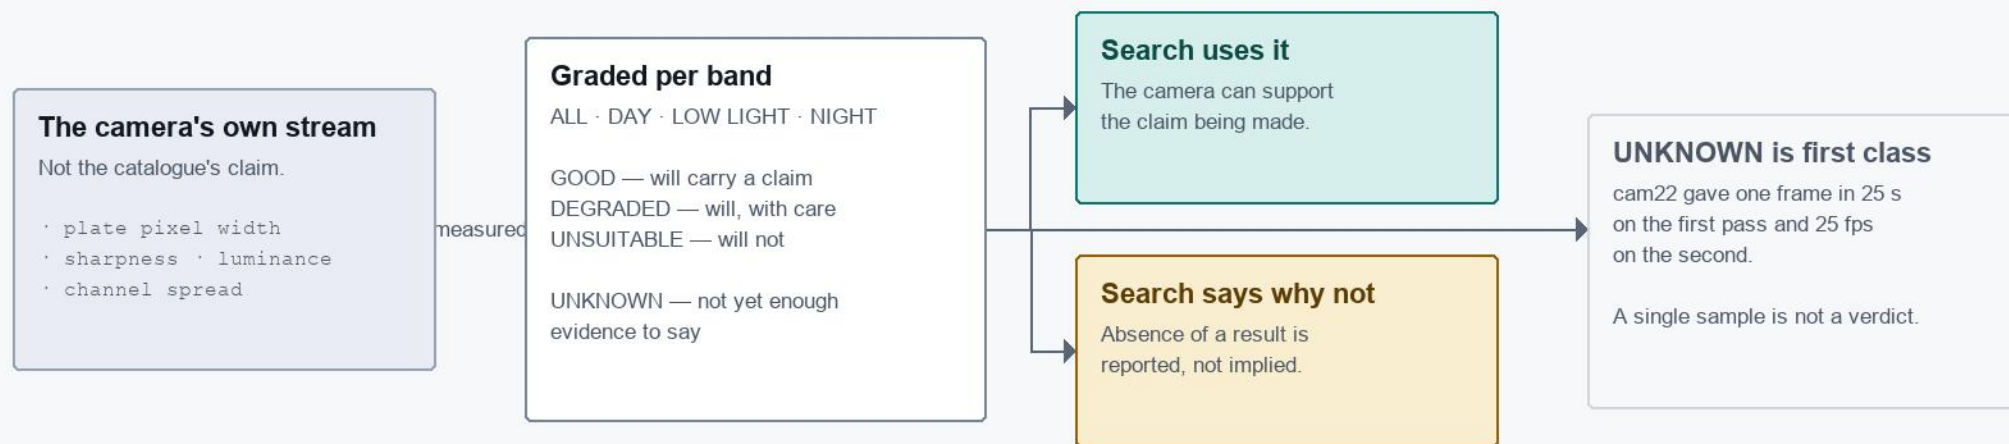

Hash-chained, append-only, and honest about what it is not

The certificate is a draft by design. Calling an output “legally admissible” is a claim about a court's decision, and no system is in a position to make it.

Camera capability

Measured from the stream, per camera, per time band

On the organiser's grid: 28 GOOD for presence, 29 GOOD for vehicle detection, 16 UNSUITABLE for appearance because they are infrared (MEASURED). A system that assumes uniform capability returns nothing from half the estate and never says why.
